Controlling Your Electric Fencing Made Easy with Your Mobile Phone

You are sitting at the breakfast table and read the latest news on your mobile phone. You switch to your IP Energiser app and check the voltage on your electric fencing setup. With a touch on your app the voltage of your energisers is displayed:

Cloud Connected:		Connected	
8 J Southern Creek	9.0kV	ON	OFF
16 J Dairy Flats	8.9kV	ON	OFF
12 J Sunny Hill	9.0kV	ON	OFF

Screenshot taken from the phone app

.....and you know, all is well.

*This is, in short, how the latest technology of the **Red Trout IP Energiser** provides you with the ultimate farm control. It was developed and is made in Australia and complies with the New Zealand regulations. Compared to more complex fence monitoring systems, the IP Energiser is an **all-in-one solution** for your farm management. It improves the efficiency and ease of monitoring.*

The energiser works by sending updates and alarms to your phone via your home or farm's local Wi-Fi network. When problems do occur e.g. the voltage on the fence is lower than the minimum you programmed, the IP Energiser will send you a message and keeps you in control. It allows you to turn the energiser off and on remotely at the touch of a button,

This innovation is available with our larger energisers which are:

- **Red Trout LIMB 80 IP** 8 Output Joules powers up to 80 km of fence \$ 695.00
- **Red Trout LIMB120 IP** 12 Output Joules powers up to 120 km of fence \$ 815.00
- **Red Trout LIMB160 IP** 16 Output Joule powers up to 160 km of fence \$ 990.00
inc. GST

*The **Red Trout** Energisers with **IP Technology** are much more economical than identical or similar energisers on the New Zealand market. The **Red Trout IP Energisers** are equipped with the latest electronics and Wi-Fi chip which means they are technically the most advanced on the market.*

LIMB160 IP

LIMB120 IP

LIMB80 IP
